# NLSY97 Appendix 8:

Round 1 Instrument Rosters

During the course of the CAPI survey, a number of rosters, or matrices of data, are constructed. These rosters contain one or more pieces of information on a given subject. Rosters are often presented to the interviewers as lists of information that are used to verify information, or from which one of the subjects on the roster is chosen as the answer to a survey question. For example, the EMPLOYER roster (a list of employers for whom the respondent has worked since his or her 14th birthday) is used to verify that the list of employers is accurate. Many of the rosters used during the administration of the survey are presented as consolidated blocks of data on the public release CD-ROM.

In round 1, a number of rosters were used to organize information from the Screener, Household Roster, and Non-Resident Roster Questionnaire. Some of this information was then transferred into the parent and youth interviews for verification and for use in determining question paths. Figure 1 below identifies the key rosters in the round 1 survey and shows how they were used in different parts of the survey.

The following pages list the variable names, titles, and reference numbers for the various instrument rosters used during the round 1 interview. These lists are intended to aid researchers in identifying the types of information organized in each roster and to better follow the flow of information through the interview.

Screener, Household Roster, and Non-Resident Roster Questionnaire

NONHHI Roster
Includes information on members of the youth's biological family who do not live in the youth's household collected from the household informant.

HHI2 Roster
Includes information, mainly demographic data, on each member of the youth's household collected from the household informant.

YOUTH Roster
Includes information specific to the NLSY97-eligible youth, as well as some data about the youth's parents, collected from the household informant.

Parent Questionnaire

PARHHI Roster
Information from the HHI2 roster is transferred into the parent interview. Some information is verified and updated; other data are used to direct the flow of the interview.

PARYOUTH Roster
Information from the YOUTH roster is transferred into the parent interview. Some information is verified and updated; other data are used to direct the flow of the interview.

Youth Questionnaire

BIOCHILD Roster
Created during the youth interview (with some data from the HHI2 roster); contains data on the youth's biological children.

YEMP Roster
Created during the youth interview; contains data on the youth's employers.

YOUTH Roster
The YOUTH roster is transferred into the youth interview. Some youth-specific information is verified and updated; other data are used to direct the flow of the interview.
